**DAVIE SHORING DONATES FIVE BUILDINGS TO THE NEW ORLEANS MISSION TO ASSIST IN THE  
COVID-19 OUTBREAK**

**New Orleans, Louisiana:** Davie Shoring is donating five buildings to the New Orleans Mission in light of the COVID-19 outbreak in New Orleans. The five buildings will serve as day rooms for men and women from the homeless population, complete with clean bathrooms, a computer lab, game room, exercise room, and library. Davie Shoring has been preparing the site since Monday, March 23<sup>rd</sup>, and is currently moving the buildings in place to be set with the hopes of having the buildings ready for use by April 15th. The buildings will also be converted into quarantine space for COVID-19 patients from the homeless population when that need arises.

“The city asked us if we would consider opening our space to those who don’t want to go through our discipleship program. Unfortunately, the lifestyle under the bridges is really rough, so this is a way that men and women can get some shelter from the raping, beating, and drug abuse out there,” says David Bottner, Executive Director of the New Orleans Mission. “Hopefully this space will act as a continual reminder that there is a way out of their situation through Jesus Christ.”

Each of the five buildings are 768 square feet, totaling 3840 square feet of new space on the New Orleans Mission property. Warren Davie, founder and CEO of Davie Shoring, has been personally preparing the lot for construction and will set up the buildings next week. “Then we’ll need electricity and plumbing, so it’s a matter of how quickly we can find someone to help in those areas,” remarks Bottner.

**About Davie Shoring:** Davie Shoring started off with a location on Tchoupitoulas not far off from the New Orleans Mission’s current location. The company is now a major shoring contractor in the Gulf Coast region with a reputation as a quick, efficient, and trusted shoring and foundation company. Specializing in home leveling, home foundation repair, home elevation, and structural moving, the company has raised over 2,500 homes located in the flood-prone areas of Louisiana in its 24-year existence. Since 2005 alone, they have finished over 1,300 homes, including moving homes and elevating houses to any required height. In addition, its PermaLock shoring technology has made it a leader in segmented concrete pilings that will support a home for years. Our teams are very excited to be participating in this project, being able to give back to New Orleans community.
